

Note. The following file was developed on Corel Presentations software, and runs automatically as an exe file when edited as follows:

There are two Overburden Slusher simulations: OSone file is **1.6MB** and OStwo at **7.1MB**

The existing file names with embedded URL are:

[OSone.exe.wpg](#)

and

[OStwo.exe.wpg](#)

Save the file to your computer and then **RENAME** it to either **OSone.exe** or **OStwo.exe**

Now it can be run and viewed.

The right click mouse button is available for tracking through the file.

Enjoy.
